About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC online collection - oc.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 18 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

IEC CA Promotional Matrix**FOREWORD**

The text of this publication is based on the following documents and decisions:

Document(s)	Decision(s)
CAB/1506/R, CAB/1531A/RM, CAB/1530/DL	CAB Decision 39/21 (A.1:1))
CAB/2039/DV, CAB/2039A/RV	CAB Decision 49/01

This second edition is an update of the previous edition from 2016. Some additional target audiences have been added together with a revision of the focused messages from each of the IEC CA Systems.

Also included in this new edition is a new section focused specifically on cybersecurity.

INTRODUCTION

The IEC CA activities create value for many stakeholders. However, for many of those stakeholders, the value that is created is transparent. They benefit from that value, but are either unaware of its presence (taking it for granted and assuming that that is just the way it is), or attribute it to some other source or effect (for example attributing to government regulation, or giving too much importance to accreditation, and so on).

Even within the IEC community itself, on the standards development (SD) side, there is little awareness that technical standards only create real value when they are coupled with conformity assessment (CA), whether it be manufacturers checking that their products are conformant, or formal certification by an independent third party, or some other form of conformity assessment.

Some of the reason for this lack of awareness is due to an absence of promotional messages to some stakeholders, other reasons include vague messages, mixed messages, or messages that were not focused to the stakeholder group's needs.

The Promotional Matrix given in this document was created by CAB WG 14: Promotions. It provides a list of stakeholders and indicates the value that the IEC CA activities create for each of them (drivers) and the message that should be communicated. It is intended to be used as a guide for any promotional activities initiated within the IEC and its CA community.

The goal is to “stay on message”; to send consistent messages to the targeted stakeholder groups no matter who creates the promotional material.

IEC CA Promotional Matrix

1 Background

Based on nearly 40 years of experience, IEC has developed the expertise, systems and tools necessary to effectively run true standardized conformity assessment (CA) services on a global basis. These global CA services create value for the different stakeholders involved. However, the value created is not the same for each of the different stakeholders.

For many of the stakeholders, the value that is created by the IEC CA activities is transparent. They benefit from that value, but are either unaware of its presence (taking it for granted and assuming that that is just the way it is), or attribute it to some other source or effect (for example attributing to government regulation, or giving too much importance to accreditation, and so on).

In business terms, the value created can be expressed as the market drivers. Some of the stakeholders are active stakeholders and participate at some level in the IEC CA activities, e.g. manufacturers seek certification, certification bodies and testing laboratories join the IEC CA Systems, etc. They do this because they obtain value that is greater than the cost of not doing so, or of doing some alternative. It makes economic sense. It is a market driver.

There are also passive stakeholders, who do not actively participate in the IEC CA activities, but nevertheless obtain benefits and value from them. Examples of these are consumers who obtain the benefits of more choice, lower prices and safer products, and developing countries regulators who can simply use the certificates issued under an IEC CA System as proof of compliance, as a free service, without having to invest in creating costly quality infrastructure at this level.

The objective of the Promotional Matrix is to identify the stakeholders that benefit from the IEC CA activities, to understand the value that is created (the market drivers) for each and to define messages targeted for each. It is then intended to be used as a guide for any promotional activities initiated from the IEC Communication Division, the IEC CA Systems and by the IEC National Committees or CA Mirror Committees, and so on. The goal is to communicate a consistent and focused message to each of the targeted stakeholder groups no matter who creates the promotional material.

2 Audiences

The messages promoting the IEC CA activities can be general, but are much more effective when they are focused messages for the targeted audience. To achieve this, however, it is first necessary to identify those targeted audiences.

For IEC CA activity promotion, the following nine target audiences have been identified:

- 1) Industry and manufacturers (CA service seekers)
- 2) Regulators from developing countries
- 3) National regulators and government departments
- 4) Regional economic cooperation programmes
- 5) Insurance and financial bodies
- 6) Certification bodies and test laboratories (CA service providers)
- 7) IEC Young Professionals and future leaders
- 8) Internal IEC members including technical committees
- 9) Consumers and general public

3 Tailored-targeted messages

The role of promoting something is to raise its awareness in the minds of the intended audience. To achieve this, the promotional message needs to “speak to” the audience, “hit the spot”, “be tuned to needs”, and so on, or, in a word, it needs to be “tailored” to the targeted audience.

The tailored message needs to carry incentives for which the targeted audience is sensitive. Those incentives (drivers) vary significantly between the audiences based on their needs and goals. For example, the drivers for industry and manufacturers include profit and marketing goals, while those for regulators include citizen safety and sustainability needs.

The Promotional Matrix identifies specific drivers for the specific targeted audiences. When targeting a specific audience the message should be consistent with one or more of the specific identified drivers.

When not targeting a specific audience, but simply communicating the attributes of the IEC CA activities, then the overriding message and tone of the message should be based on an expression of the following:

- 1) **VALUE:** standards only create value when combined with conformity assessment
- 2) **CONFIDENCE:** IEC CA provides earned confidence giving certainty of performance
- 3) **QUALITY:** CA equates to proven quality

In the context of the IEC and both its standards development and conformity assessment activities, this basic message can be summed up in the slogan:

standards = quality
conformity assessment = proven quality

4 Channels and mediums

The Promotional Matrix also identifies the “channel” or organizations through which the appropriate message can be relayed, and with it the mediums that can be employed to deliver that message. For example, IEC Young Professionals can benefit from mediums such as social media or apps, delivered through e-learning programmes. In contrast, CA service providers (such as certification bodies and testing laboratories) are likely to respond to live presentations and face-to-face meetings supported by written material such as brochures.

5 Goal

The Promotional Matrix is intended to be used as a guide for all IEC CA promotional activities.

Its intention is to serve as the reference guide for the message(s) to be communicated to the targeted audiences, by the IEC Communication Division, the IEC CA Systems and by the IEC National Committees or CA Mirror Committees, and other members of the IEC CA community. Staying “on message” is important.

The goal is a consistent message from all sources and through all mediums that is tuned to the respective audience and maximizes the benefit to them.

6 Promotional Matrix

Audience	Attribute	High level IEC (overall)	IECEE	IECEX	IECQ	IECRE
Manufacturers and traders (exporters/ importers and retailers)	Drivers	<ul style="list-style-type: none"> • Business development • Profits / Market share • Qualification recognition • Brand competition • Marketing / Strategic tool • Sustainable Development Goals (UN) 	<ul style="list-style-type: none"> • Product & development cost • Market access • Vendor qualification • Risk management 	<ul style="list-style-type: none"> • Market access • Safety and risk management • Qualification recognition 	<ul style="list-style-type: none"> • Vendor qualification • Marketing / Strategic tool 	<ul style="list-style-type: none"> • Vendor qualification (wind, marine, PV) • Profits / Market share • Insurance • Differentiation • Reducing audit overhead (PV, with rating system) • Bankability
